

Andrei Ciprian Popescu

PROFILE

I started in the software industry as a C++ developer and began a love affair with .NET more than ten years ago. It is still ongoing and growing, especially now with rise of net core and single .NET. I am a certified Microsoft professional strong recently with web APIs and backends, with a constant focus on clean code, SOLID principles, enterprise and design patterns. To complement that experience I have had my share of distributed systems and web frontends. I am married to Aurora, hence the picture on the left. I play tennis.

WORK EXPERIENCE

Edgeless | May 2025 – present | Principal .NET *Engineer*, Team Lead | **project outsourcing @ ProUnity , HeadFirst Group** | workforce supply and demand

Joined as principal, moved into a engineering team lead role for the talent acquisition team with the group private equity buyout. Transformed into a full-stack software engineer along the way so as to support the company's push to an agentic first development workflow. Utilized tools like Claude, Cursor, GitHub Copilot. Assessed, promoted spec-driven frameworks. Added bespoke skills. Improved token usage and LLM session context relevance via knowledge graph/wiki.

Delivered production features leveraging a .NET 9 / ASP.NET Core (C#) backend paired with an Angular frontend, complemented by SQL Server and Azure CosmosDB for audit logs, and Azure Functions for sending emails. Integrated Azure OpenAI with SemanticKernel for AI-driven CV parsing and candidate matching/comparison, while enhancing Angular on-boarding flows to pre-fill candidate profiles from AI extraction results.

Led the migration from .NET 8 to .NET 9, updating project configurations, CI YAML pipelines, and optimizing EF Core 9 queries. Systematically removed dead code and redundant dependencies, enhancing maintainability and reducing coupling.

Managed / consolidated work across Azure Git Repos for legacy systems and GitHub Enterprise for new development. Developed and maintained Azure DevOps YAML pipelines and new GitHub Actions workflows for the .NET 9 cycle. Standardized local developer environments using Docker Compose and managed worker service Dockerfiles. Promoted a sprint-based Agile model with Jira best practices and improved long-term code base health through expanded unit test coverage and architecture fitness tests. Conducted dotnet Aspire research. Adoption of Docker for local builds and Terraform for infrastructure management was decided.

Language: c# 13, net9.0, typescript, Angular 20

Storage/data: SQL Server, EFCore, blob, table storage, CosmosDb

Tests: NUnit, Coverlet, cobertura, test coverage improvements

Source Control: Azure Git Repos, Github Enterprise

CI/CD: Azure Pipelines, Github Actions

Bug tracking: Azure Boards, Jira

Microsoft | July 2022 – May 2025 | *Software Engineer II* | **Azure Core** | internal cloud infrastructure

Geneva Actions(GA) is an internal ring 0 cloud service offering a .NET sandbox to first parties, allowing maintenance and tuneup of their infrastructure. My on-boarding project was to improve transparency and reaction to ill performing extensions, involving data analysis, classification of issues into problem categories, owner notification and reactions like circuit breaker or throttling. Improved test coverage and performance in foundational parts of the application. 2023 consisted in the implementation of SDP safe deployment practices, allowing deployment and orchestration of a single package across regional environments. Minor frontend work with knockout.js. Made several proposals to improve the status quo: use CQRS for SDP orchestration, adopt onion architecture and improve project dependencies. In 2024 I planned porting GA as a whole to .NET8 and implemented parts of the migration. Massive hardening of the package publish process. 2025 consisted of on call rotation adoption and porting dSTS based auth to new .NET and MSAL v2, including the C# SDK codegen refactoring from autorest to NSwag.

Language: c# 12, full framework 4.7.2, net6.0, net8.0

Storage/data: Table, blob, queue storage, Redis. Kusto/KQL

Tests: MSTest, FluentAssertions, test coverage improvements

Source Control/Bug tracking: Azure Repos, Pipelines, Boards

Distributed: Service Fabric. Educated myself with Kubernetes, Orleans, dapr

Collectius | September 2021 – June 2022 | *Senior C# Developer* | **consultancy** | banking, NPL

The company is buying loans from several banks in South East Asia and provides an online platform where customers can manage their debt. I am a member of a 6 man team doing mainly backend work. I have developed several Rest APIs in the effort to connect public facing endpoints and become cloud native, but also cater for various needs of internal departments, moving from `pen and paper` to web services. I am assisting with devops, namely build pipelines for APIs and functions.

Developer certifications	WORK EXPERIENCE
AZ-900	BFF/API gateway based on Yarp. Implemented implicit, service and OBO auth flows with AAD.
Microsoft Certified Azure Fundamentals	Pdf and docx document generation based on dynamic html templates, scryber and Open XML.
Certification no: 1514-2902	Designed an event sourcing system for the approval of various workflows within the company.
December 7, 2022	Azure V4 out of process/isolated functions. Implemented a scheduling system based on Hangfire and custom xml configuration / background jobs.
M101N	Language: c# 9,10, net5.0, net6.0
Feb 23, 2016	Database: PostgreSQL, SQL Server, Dapper, Dynamics
MongoDB for .NET Developers	Tests: xUnit, Azure Pipelines coverage
	Source Control/Bug tracking: Azure Repos, GitHub
	Messaging: Nats, NEventStore, Azure Queues
	Deployment: Azure Pipelines, Docker
	Logging: Serilog, PostgreSQL, Application Insights
MCTS 70-511	Genos June 2021 – August 2021 <i>Senior Software Engineer</i> outsourced @ LMS365 learning platforms
Nov 28, 2014	
Windows Applications Development with Microsoft .NET Framework 4	During my very short stay with the company, I switched security to API keys from basic authentication. I also assessed a move from ASP.NET with full framework, first to the new csproj package reference format, then porting to netcore. Added new screens to the web React frontend.
Score: 935/1000	
MCTS 70-516	Qualysoft May 2019 – May 2021 <i>Team Lead & Architect</i> project outsourcing @ EvoGps telecom, IoT
Sep 26, 2014	
Accessing Data with Microsoft .NET Framework 4	I lead a team of three developers re-engineering the EvoGps fleet management solution. Built a distributed system to replace the existing monolithic architecture which reached storage limitations and had performance issues. I conducted technical interviews for C#/.Net positions within the company, ande built a development team for this project. I had the freedom to design an open source micro-services architecture with all the constituting frameworks and persistence options.
Score: 838/1000	A series of rest APIs handle bidirectional TCP communication with GPRS devices. Further layers of the system parse and process device data for various vendors and equipment types. In the end, processed data is persisted into a SQL database. Deployment is done on premises with a set of scripts on top of systemd, a sort of poor man's CD developed ad-hoc. Health checks have been added for all infrastructure dependencies. Semantic logging and monitoring are first class concerns. A multitude of metrics is gathered to monitor overall application performance. Traceability is end to end. A custom command bus has been built on top of the popular MassTransit framework. Abide by proven enterprise message queue patterns and practices are. Also, tons of other cool open-source libraries.
MCPD	
Apr 16, 2012	
Microsoft Certified Professional	
Awarded with previous certification.	
MCTS 70-515	Language: c# 7.3, netcore3.1, netstandard2.1
Nov 08, 2011	Infrastructure: Kestrel Edge, Debian 10
Web Applications Development with .NET Framework 4	APM: Serilog, healthchecks, Elastic Search, Kibana, Logstash, Prometheus
	Database: MongoDB, SQL Server 2016, Redis, Dapper
	Tests: xUnit, Moq, AltCover, ReportGenerator
	Source Control/Bug tracking: GitLab, Jira NextGen, Confluence, Markdown
	Messaging: IO Pipelines, RabbitMQ, MassTransit, RawRabbit
	Deployment: Docker, bash, virtual machines
	Misc: Polly, IO Abstractions, NodaTime
All mentioned certifications available on request.	Qualysoft January 2019 – July 2020 <i>Senior Engineer</i> outsourced @ Hoist Finance finance
Stack Overflow	
When: 2024-11-04	Hoist Finance is a trusted debt restructuring partner to international banks and financial institutions.
Reputation: 3015	Handling non-performing loans and supporting individuals in becoming debt free is done via a portal which integrates several downstream web APIs. These APIs are Hoist debt collection platforms in Germany and Spain, and partner REST APIs in France and Poland. Part of a mainly Polish development team. Focus on clean code and high unit test coverage. Client decided to move development completely to India.
Reached: 291K	
Top tag: c#	
	Language: c# 7.3, asp.net-core 2.2, .net-standard2, language-ext
	Tests: XUnit, NSubstitute, NFluent, xbehave, IO.Abstractions
	Database: postgresql
	Web: asp.net mvc, razor, episerver
	Source Control/Bug tracking: Azure DevOps, git, jira, confluence
	Deployment: Azure CI/CD
	Miscellaneous: Autofac, Flurl, ReSharper

Education	WORK EXPERIENCE
POLITEHNICA University of Bucharest [2002 – 2007] Department: Computer Science and Engineering Major: application programming Graduation grade: 8. System: pre-Bologna, 5 years of study. Alumnus profile: here. Thesis: Stochastic analysis of a singles tennis match. Determine real odds using time series analysis and a Bayesian model over ATP web collected data. C++ with a MFC user interface, Matlab C compiler for various algorithms implementations. High school [1998 – 2002] Bogdan Petriceicu Haşdeu National College Buzău. Graduation grade: 9.35 Baccalaureate: 9.82. A participant in the 1998 and 1999 National Math Olympiads in Alba Iulia & Braşov.	Endava March 2018 – January 2019 <i>Senior Engineer</i> outsourcing @ Royal Mail Group mailing industry Complex mail operator management project consisting of an Angular GUI on top of several ASP.NET Core 2.1 APIs and a SQL Server database. Seven Agile development teams in two cities with six up to eight developers in each team. Angular version was incremented from 4 to 7 from development start until delivery. Clean architecture with domain driven design and command query request segregation with MediatR. Database first EF6 with dapper package publishing instead of migrations. Highlights of my contribution to the project: implement custom authorization and authentication on top of client AD, performance optimization of EF queries and database related services, one of the few able to write karma unit tests, also one of the few constant backend TDD practitioners, designed algorithms to generate constrained map location points, enforced solid design practices and refactored convoluted areas of the application. After project delivery, during my final days with Endava, I prototyped several AD query/metadata search piggyback services in the company's effort to alleviate and standardize the interview process. These APIs were used by an Angular material website. Language: C# 7.2, ASP.NET Core 2.1, .NET Core 2 Design: DDD, CQRS, MediatR, DryIOC Web: SPA, Angular 7, Prime NG, SCSS, CSS3, HTML5, Karma, Jasmine, Angular Material 7.2 APM: Serilog, health checks, Elastic Search, Kibana, Logstash, Prometheus Database: SQL Server, EF6, TSQL, SQL Geometry, Dapper Tests: NUnit, NSubstitute Source Control/Bug tracking: Git, VSTS, Bitbucket, Jira Endava June 2017 – February 2018 <i>Senior Engineer</i> extended team @ eShopWorld online shops Personnel outsourcing. Member of several development teams doing Scrum. Working remotely together with existing teams based in Dublin, then Newry. Developed an Angular portal on top of several ASP.NET Core web APIs as part of the shipping portal team. I have also delivered a complete micro-service with a CosmosDB over DocumentDB database, covering all development lifecycle stages, envisioning to documentation. Its responsibility was site features configuration per client, language, currency, and country. As a member of the checkout team, we participated in the initial design of the product. Language: C# 7.1, ASP.NET Core, .NET Core Web: Angular [2-4], Karma, Jasmine, Webpack, Bootstrap, Flex, SCSS, i18n Web APIs: SwaggerUI, AutoRest, AutoMapper, FluentValidation, microservices Cloud: AppInsights, Azure EventHubs Database: EF Core, TSQL, Cosmos DB, DocumentDB Tests: XUnit, FluentAssertions Source Control/Bug tracking: VSTS, Git, Markdown, Confluence, Jira BullGuard March 2017 – May 2017 <i>Senior C# Developer</i> in-house product antivirus software During my very short span there I tried to refactor the existing DAL with NHibernate & FluentNHibernate in the company's failed effort to move from a monolith to a micro-services architecture. CGS Inc May 2015 – February 2017 <i>Senior C# Developer</i> in-house product fashion ERP Member of the BlueCherry ERP team. I have written from scratch: a WCF REST image service with Mongo cache; a mupdf based PDF/AI to image rendering library with Managed C++, after evaluating several commercial PDF rendering APIs; a Hangfire based scheduling framework to replace existing FoxPro services and an ASP.NET MVC 5 site to configure such tasks, Mongo backend; Data pipeline exposing enterprise SQL Server data to PowerBI. Language: C# 5 UI: WPF, ASP.NET MVC-5 Database: SQL Server, TSQL, Mongo DB, GridFS Source Control: TFS Misc: WCF, Hangfire, Power BI, Apache Spark, Moebius, MPI. Libra Internet Bank February 2015 – May 2015 <i>IT Development Manager</i> in-house product banking I lead a development team of 2 to 4 people developing a desktop application for bank branches internal usage. I estimated development times, planned enhancements to the IBS desktop application, managed colleagues.

Adopted a full agentic code production workflow with Claude, Cursor starting February 2026. Dropped Github Copilot. Personal preference: spec driven workflow with obra/superpowers.

Ecrion | July 2012 – August 2014 | *C# senior developer* | **outsourced** @ BAInsight | SharePoint

I worked for the Longitude Search, Preview and Connector Framework teams building custom solutions for SharePoint.

For the Search team I have designed, developed, and documented a series of WCF services for content enrichment/data mining using custom APIs like Pingar, or Lucene. I have also designed and coded a façade for integrating multiple enrichment services into a single deployment. Completed a standalone, SharePoint decoupled, asynchronous enrichment WCF data service, a mediator between a local Solr instance and a SharePoint farm.

For the Preview team I have designed and implemented document conversion from Visio, OneNote, and Dita to html. I also ported existing functionality from Java assemblies like Saxon, Xalan or Fop. I refactored several areas of the product by enforcing design patterns and reviewed junior developers' code.

BelierSoft | October 2011 – June 2012 | *C# developer* | **outsourced** @ Amelkis | finance, accounting

My first .NET job. I was a member of the Opera team that developed a C# 2.0 accounting expertise ERP whose sole beneficiary is the French company Amelkis. I provided maintenance, designed new features, and refactored code. My work there consisted of intensive use of SQL Server 2008/TSQL, database design, ADO.NET custom code, Windows Forms and Crystal Reports on the side.

Graitec | July 2006 – April 2010 | *C++ developer* | **in-house** product suite | civil engineering

Graitec produces software for the civil engineering industry. Member of the Advance Design & Effel teams. My contribution includes automatic report generation, rtf engine maintenance and development, application localization and internationalization, developing graphical user interfaces, building a unit and integration test framework, MSOffice automation.

I have been working extensively with XML and MFC. I have also refined shape morphing algorithms for the 2D mesh process and used applied calculus techniques to compute integrals for the section engine.
